Thaw and Culture Details

Cell Line Name	UWWC1-DS1	
WiCell Lot Number	WB68233	
Parent Material	UWWC1-DS1- WB21343	
Provider/Client	University of Wisconsin – Dr. Anita Bhattacharyya	
Banked By	WiCell	
Thaw and Culture Recommendations	WiCell recommends thawing 1 vial into 3 wells of a 6 well plate using mTeSR™ 1 and Cultrex®.	
Protocol	WiCell Feeder Independent Pluripotent Stem Cell Protocol	
Culture Platform Prior to Freeze	Medium: mTeSR™ 1	Matrix: Cultrex®
Passage Number	p30 Cells were cultured for 29 passages prior to freeze. Plated cells at thaw should be labeled passage 30.	
Date Viald	20-JANUARY-2024	
Vial Label	UWWC1-DS1 p30 WB68233 Store at -135C or colder Made in United States Research Use Only 	
Biosafety and Use Information	Appropriate biosafety precautions should be followed when working with these cells. The end user is responsible for ensuring that the cells are handled and stored in an appropriate manner. WiCell is not responsible for damages or injuries that may result from the use of these cells. Cells distributed by WiCell are intended for research purposes only and are not intended for use in humans.

Results

Test Description	Test Provider	Test Method	Test Specification	Result
Karyotype	WiCell	G-T-L Banding performed on 20 metaphase cells	Expected karyotype	See Report
	Results: 47,XY,+21[20] Interpretation: This is an abnormal karyotype. An extra copy of chromosome 21 (trisomy 21) is present in twenty of twenty cells examined. No other clonal abnormalities were detected at the stated band level of resolution. This report has been updated to remove a reference to testing the parental line on 23Feb24.			
Post-Thaw Viable Cell Recovery	WiCell	Thaw using specified Thaw & Culture Recommendations	≥ 15 Undifferentiated Colonies prior to passage, ≤ 30% Differentiation prior to passage, and recoverable attachment after passage	Pass
Identity by STR	WiCell	PowerPlex 16 HS System by Promega™	Consistent with STR profile of deposited cell line	See Report
Mycoplasma	WiCell	PCR	Amplification of mycoplasma specific DNA detected with negative result	Pass
Sterility	Steris	Native Product Direct Transfer using FTM and TSB (ST/07)	Negative for growth following 14 days of culture	Pass

Approval Date	WiCell Quality Assurance Approval
29-July-2026	7/29/2026 X HEB HEB WiCell Quality Assurance Signed by: Bruner, Haley

Date Reported: February 23, 2024

Cell Line: UWWC1-DS1-WB68233

Submitted Passage #: 30

Date of Sample: 1/31/2024

Specimen: Human IPSC

Results: 47,XY,+21[20]

Cell Line Sex: Male

Reason for Testing: LOT_RELEASE

Investigator: WiCell Stem Cell Bank, WiCell

Cell: 54

Slide: G03

Slide Type: Karyotype

Total Counted: 20

Total Analyzed: 8

Total Karyogrammed: 4

Band Resolution: 425 - 450

Updated Interpretation:

This is an abnormal karyotype. An extra copy of chromosome 21 (trisomy 21) is present in twenty of twenty cells examined. No other clonal abnormalities were detected at the stated band level of resolution.

This report has been updated to remove a reference to testing the parental line on 23Feb24.

Limitations: This assay allows for microscopic visualization of numerical and structural chromosome abnormalities. The size of structural abnormality that can be detected is >3-10Mb, dependent upon the G-band resolution obtained from this specimen. For the purposes of this report, band level is defined as the number of G-bands per haploid genome. It is documented here as "band level", i.e., the range of bands determined from the four karyograms in this assay. Detection of heterogeneity of clonal cell populations in this specimen (i.e., mosaicism) is limited by the number of metaphase cells examined, documented here as "# of cells counted".

This assay was conducted solely for listed investigator/institution. The results of this assay are for research use only. Short Tandem Repeat

Requestor: WiCell Stem Cell Bank, WiCell

Samples Received: 31Jan24

STR Amplification Date: 06Feb24

Form SOP-89.01

Version 12.0

Assay Description: STR analysis is performed using the PowerPlex 16 HS System by Promega™. Results are reported as 13 CODIS STR markers, Amelogenin for gender determination and two low-stutter, highly discriminating pentanucleotide STR markers.

Results: The genotypic profiles comprise a range of 31 allelic polymorphisms across the 15 STR loci analyzed.

Interpretation: The concentration of DNA required to achieve an acceptable STR genotype (signal/ noise) was equivalent to that required for the standard procedure (~1 ng/amplification reaction) from human genomic DNA. These results suggests that the cells submitted correspond to the cell lines as named and were not contaminated with any other human cells or a significant amount of mouse feeder layer cells.

Sensitivity: Sensitivity limits for detection of STR polymorphisms unique to either this or other human cell lines is ~2-4%.

Tri-allelic Pattern: A tri-allelic pattern was detected at the FGA and D21S11 loci of sample 100470. This observation could be the result of chromosomal gains and/or amplifications in this cell line.
