## Thaw and Culture Details

Cell Line Name	<b>JHU158i</b>	
WiCell Lot Number	<b>DB36358</b>	
Provider/Client	Johns Hopkins University – Laboratory of Dr. Lewis Becker	
Banked By	Johns Hopkins University – Laboratory of Dr. Lewis Becker	
Thaw and Culture Recommendations	WiCell recommends thawing 1 vial into 5 wells of a 6 well plate using TeSR™ - E8™ and Recombinant Human Vitronectin. WiCell recommends thawing using ROCK Inhibitor for best results.	
Protocol	WiCell Feeder Independent Pluripotent Stem Cell Protocol	
Culture Platform Prior to Freeze	Medium: E8	Matrix: Vitronectin
Passage Number	p5 Cells were cultured for 4 passages prior to freeze and post reprogramming. Plated cells at thaw should be labeled passage 5.	
Date Vialled	23-February-2016	
Vial Label	P158 P5 1.5x10 <sup>6</sup> 2/23/16	
Biosafety and Use Information	Appropriate biosafety precautions should be followed when working with these cells. The end user is responsible for ensuring that the cells are handled and stored in an appropriate manner. WiCell is not responsible for damages or injuries that may result from the use of these cells. Cells distributed by WiCell are intended for research purposes only and are not intended for use in humans.	

# Certificate of Analysis

## Results

Test Description	Test Provider	Test Method	Test Specification	Result
Karyotype	WiCell	G-T-L Banding performed on 20 metaphase cells	Expected karyotype	See Report
	<p><b>Results:</b> 46,XY,t(14;17)(q13;q23)[2]/46,XY[18]  <b>Interpretation:</b> This is an abnormal karyotype. An apparently balanced translocation between the long (q) arm of chromosome 14 and the long arm of chromosome 17 is present in two of twenty cells examined. No other clonal abnormalities were detected at the stated band level of resolution.</p>			
Post-Thaw Viable Cell Recovery	WiCell	Thaw using specified Thaw & Culture Recommendations	Recoverable attachment after passage	Pass
Identity by STR	WiCell	PowerPlex 16 HS System by Promega™	Defines STR profile of deposited cell line	See Report
Mycoplasma	WiCell	PCR	Amplification of mycoplasma specific DNA detected with negative result	Pass
Sterility	Steris	Native Product Direct Transfer using FTM and TSB (ST/07)	Negative for growth following 14 days of culture	Pass

## Testing Reported by Provider

The Provider stated that some or all of the additional analyses listed below may have been performed for this cell line. For more information, publication and dbGaP links, where available, are provided on the cell line specific web page on the WiCell website.

- Embryoid bodies
- Infinium® Expanded Multi-Ethnic Genotyping Array (MEGA<sup>EX</sup>)

Approval Date	WiCell Quality Assurance Approval
02-June-2022	<p style="text-align: right;">6/2/2022</p>  <p><small>JKG WiCell Quality Assurance Signed by: Gay Jemma</small></p>

**Date Reported:** Friday, April 22, 2022

**Cell Line:** JHU158i-DB36358

**Submitted Passage #:** 6

**Date of Sample:** 4/18/2022

**Specimen:** Human iPSC

**Results:** 46,XY,t(14;17)(q13;q23)[2]/46,XY[18]

**Cell Line Sex:** Male

**Reason for Testing:** LOT\_RELEASE

**Investigator:** WiCell Stem Cell Bank, WiCell

**Cell:** 32

**Slide:** G02

**Slide Type:** Karyotype

**Total Counted:** 20

**Total Analyzed:** 8

**Total Karyogrammed:** 4

**Band Resolution:** 400 - 475

### Interpretation:

**This is an abnormal karyotype. An apparently balanced translocation between the long (q) arm of chromosome 14 and the long arm of chromosome 17 is present in two of twenty cells examined. No other clonal abnormalities were detected at the stated band level of resolution.**

**Completed by:** Leah George, CG(ASCP)

**Reviewed and Interpreted by:** Vanessa Horner, PhD, FACMG

*Limitations: This assay allows for microscopic visualization of numerical and structural chromosome abnormalities. The size of structural abnormality that can be detected is >3-10Mb, dependent upon the G-band resolution obtained from this specimen. For the purposes of this report, band level is defined as the number of G-bands per haploid genome. It is documented here as "band level", i.e., the range of bands determined from the four karyograms in this assay. Detection of heterogeneity of clonal cell populations in this specimen (i.e., mosaicism) is limited by the number of metaphase cells examined, documented here as "# of cells counted".*

*This assay was conducted solely for listed investigator/institution. The results of this assay are for research use only. Unless otherwise mutually agreed in writing, the services provided to you hereunder by WiCell Research Institute, Inc. ("WiCell") are governed solely by WiCell's Terms and Conditions of Service, found at [www.wicell.org/privacyandterms](http://www.wicell.org/privacyandterms). # Short Tandem Repeat

Requestor: WiCell Stem Cell Bank, WiCell  
Samples Received: 20Apr22, 18Apr22  
STR Amplification Date: 23Apr22

**Assay Description:** STR analysis is performed using the PowerPlex 16 HS System by Promega™. Results are reported as 13 CODIS STR markers, Amelogenin for gender determination and two low-stutter, highly discriminating pentanucleotide STR markers.

**Results:** The genotypic profiles comprise a range of 28 allelic polymorphisms across the 15 STR loci analyzed.

**Interpretation:** The concentration of DNA required to achieve an acceptable STR genotype (signal/ noise) was equivalent to that required for the standard procedure (~1 ng/amplification reaction) from human genomic DNA. These results suggests that the cells submitted correspond to the cell lines as named and were not contaminated with any other human cells or a significant amount of mouse feeder layer cells.

**Sensitivity:** Sensitivity limits for detection of STR polymorphisms unique to either this or other human cell lines is ~2-5%.

**Minor Contamination:** Sample 91600 shows signs of possible contamination. The most likely explanation for this result is that two cultures have been mixed.
