Thaw and Culture Details

Cell Line Name	PENN033i-182-2			
WiCell Lot Number	DB36145			
Provider/Client	University of Pennsylvania – Dr. Daniel	Rader		
Banked By	Penn Institute for Regenerative Medicin	e iPS Core Facility		
Thaw and Culture Recommendations	WiCell recommends thawing 1 vial into Culture Medium and MEF. WiCell recom			
Protocol	WiCell Feeder Based (MEF) Pluripotent	t Stem Cell Protocol		
Culture Platform Prior to Freeze	Medium: Stem Cell Culture Medium	Matrix: MEF		
Passage Number	p13 Cells were cultured for 13 passages prior to freeze and post colony selection. Plated cells at thaw should be labeled passage 14.			
Date Vialed	02-August-2015			
Vial Label	iPS-182 SEV2 P13 8/2/2015 ZL			
Biosafety and Use Information	Appropriate biosafety precautions should be followed when working with these cells. The end user is responsible for ensuring that the cells are handled and stored in an appropriate manner. WiCell is not responsible for damages or injuries that may result from the use of these cells. Cells distributed by WiCell are intended for research purposes only and are not intended for use in humans.			

The material provided under this certificate has been subjected to the tests specified and the results and data described herein are accurate based on WiCell's reasonable knowledge and belief. Appropriate Biosafety Level practices and universal precautions should always be used with this material. For clarity, the foregoing is governed solely by WiCell's Terms and Conditions of Service, which can be found at http://www.wicell.org/privacyandterms.

Date Reported: Thursday, December 8, 2022 Cell Line: PENN033i-182-2-DB36145 Submitted Passage #: 15 Date of Sample: 11/17/2022 Specimen: Human IPSC Results: 46,XY,del(6)(q13q21)[12]/46,XY[8] Cell Line Sex: Male Reason for Testing: LOT_RELEASE

Investigator: WiCell Stem Cell Bank, WiCell

Cell: 36 Slide: G03 Slide Type: Karyotype Total Counted: 20 Total Analyzed: 8 Total Karyogrammed: 4 Band Resolution: 400 - 475

Interpretation:

This is an abnormal karyotype. An interstitial deletion in the long (q) arm of chromosome 6 is present in twelve of twenty cells examined. No other clonal abnormalities were detected at the stated band level of resolution.

Limitations: This assay allows for microscopic visualization of numerical and structural chromosome abnormalities. The size of structural abnormality that can be detected is >3-10Mb, dependent upon the G-band resolution obtained from this specimen. For the purposes of this report, band level is defined as the number of G-bands per haploid genome. It is documented here as "band level", i.e., the range of bands determined from the four karyograms in this assay. Detection of heterogeneity of clonal cell populations in this specimen (i.e.,mosaicism) is limited by the number of metaphase cells examined, documented here as "# of cells counted".

This assay was conducted solely for listed investigator/institution. The results of this assay are for research use only. Unless otherwise mutually agreed in writing, the services provided to you hereunder by WiCell Research Institute, Inc. Short Tandem Repeat

Form SOP-89.01 Version 9.0

Requestor: WiCell Stem Cell Bank, WiCell Samples Received: 17Nov22, 19Nov22 STR Amplification Date: 22Nov22

<u>Assay Description</u>: STR analysis is performed using the PowerPlex 16 HS System by Promega[™]. Results are reported as 13 CODIS STR markers, Amelogenin for gender determination and two low-stutter, highly discriminating pentanucleotide STR markers.

<u>Results:</u> The genotypic profiles comprise a range of 27 allelic polymorphisms across the 15 STR loci analyzed.

Interpretation: The concentration of DNA required to achieve an acceptable STR genotype (signal/ noise) was equivalent to that required for the standard procedure (~1 ng/amplification reaction) from human genomic DNA. These results suggests that the cells submitted correspond to the cell lines as named and were not contaminated with any other human cells or a significant amount of mouse feeder layer cells.

Sensitivity: Sensitivity limits for detection of STR polymorphisms unique to either this or other human cell lines is ~2-4%.
