

Thaw and Culture Details

| | |
|----------------------------------|--|
| Cell Line Name | UCSD039i-14-3 |
| WiCell Lot Number | WB57650 |
| Provider | University of California, San Diego – Dr. Kelly Frazer |
| Banked By | WiCell |
| Thaw and Culture Recommendations | WiCell recommends thawing 1 vial into 3 wells of a 6 well plate. |
| Culture Platform | Feeder Independent |
| | Medium: mTeSR™1 |
| | Matrix: Matrigel® |
| Protocol | WiCell Feeder Independent mTeSR™1 Protocol |
| Passage Number | p18 These cells were cultured for 17 passages prior to freeze and post reprogramming. WiCell adds +1 to the passage number to best represent the overall passage number of the cells at thaw. |
| Date Vialied | 19-January-2017 |
| Vial Label | UCSD039i-14-3 p18 WB57650 |
| Biosafety and Use Information | Appropriate biosafety precautions should be followed when working with these cells. The end user is responsible for ensuring that the cells are handled and stored in an appropriate manner. WiCell is not responsible for damages or injuries that may result from the use of these cells. Cells distributed by WiCell are intended for research purposes only and are not intended for use in humans. |

Testing Performed by WiCell

Date Reported: Monday, July 02, 2018

Cell Line Sex: Male

Cell Line: UCSD039i-14-3-WB57650 13714

Reason for Testing: lot release testing

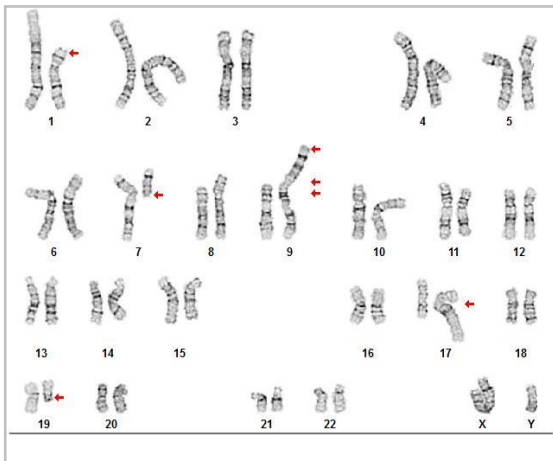

Passage#: 19

Date of Sample: 6/22/2018

Investigator: [REDACTED], WiCell

Specimen: Human IPS

Results: 46,XY,del(1)(p31.1),del(7)(q11.1),der(9)t(9;19)(p24;q13.1)t(7;19)(q11.1;q13.4)inv(7)(q11.21q36),der(17)del(17)(q23)t(1;17)(p31;q23),der(19)t(9;19)(p24;q13.1)[20]

Cell: 85

Slide: G03

Slide Type: Karyotype

Total Counted: 20

Total Analyzed: 8

Total Karyogrammed: 5

Band Resolution: 425 - 525

Interpretation:

This is an abnormal karyotype. There are complex structural abnormalities due to seemingly unbalanced rearrangements involving chromosomes 1 and 17, and chromosomes 7, 9, and 19. Additional testing, e.g., chromosomal microarray or spectral karyotyping (SKY), may be helpful in characterization of this specimen.

No other clonal abnormalities were detected at the stated band level of resolution. No normal cells were observed.

Comparison of this karyotype with the karyotype of the source (parental) specimen may be informative regarding the significance and origin of the chromosomal aberrations.

Limitations: This assay allows for microscopic visualization of numerical and structural chromosome abnormalities. The size of structural abnormality that can be detected is >3-10Mb, dependent upon the G-band resolution obtained from this specimen. For the purposes of this report, band level is defined as the number of G-bands per haploid genome. It is documented here as "band level", i.e., the range of bands determined from the four karyograms in this assay. Detection of heterogeneity of clonal cell populations in this specimen (i.e., mosaicism) is limited by the number of metaphase cells examined, documented here as "# of cells counted".

This assay was conducted solely for listed investigator/institution. The results of this assay are for research use only. Unless otherwise mutually agreed in writing, the services provided to you hereunder by WiCell Research Institute, Inc. Results: Based on the 13714-STR cells submitted by WiCell QA dated and received on 06/25/18, this sample (Label on Tube: 13714-STR) defines the STR profile of the human stem cell line UCSD039i-14-3 comprising 28 allelic polymorphisms across the 15 STR loci analyzed.

Interpretation: No STR polymorphisms other than those corresponding to the human UCSD039i-14-3 stem cell line were detected and the concentration of DNA required to achieve an acceptable STR genotype (signal/noise) was equivalent to that required for the standard procedure (~1 ng/amplification reaction) from human genomic DNA. This result suggests that the 13714-STR sample submitted corresponds to the UCSD039i-14-3 stem cell line and was not contaminated with any other human stem cells or a significant amount of mouse feeder layer cells.

Sensitivity: Sensitivity limits for detection of STR polymorphisms unique to either this or other human stem cell lines is ~2-5%.
