

Thaw and Culture Details

Cell Line Name	UCSD197i-30-2
WiCell Lot Number	WB54408
Provider	University of California, San Diego – Dr. Kelly Frazer
Banked By	WiCell
Thaw and Culture Recommendations	WiCell recommends thawing 1 vial into 4 wells of a 6 well plate.
Culture Platform	Feeder Independent
	Medium: mTeSR™1
	Matrix: Matrigel®
Protocol	WiCell Feeder Independent mTeSR™1 Protocol
Passage Number	p29 These cells were cultured for 28 passages prior to freeze and post reprogramming. WiCell adds +1 to the passage number to best represent the overall passage number of the cells at thaw.
Date Vialed	10-December-2016
Vial Label	UCSD197i-30-2 p29 WB54408
Biosafety and Use Information	Appropriate biosafety precautions should be followed when working with these cells. The end user is responsible for ensuring that the cells are handled and stored in an appropriate manner. WiCell is not responsible for damages or injuries that may result from the use of these cells. Cells distributed by WiCell are intended for research purposes only and are not intended for use in humans.

Testing Performed by WiCell

Test Description	Test Provider	Test Specification	Result					
	WiCell	SOP-CH-003	Expected karyotype	See Report				
Karyotype by G-banding	Interpretation: There is that chromosomes are no further evidence of the	Results: 46,XX Nonclonal findings: 47,XX,+12 Interpretation: There is one nonclonal finding, listed above. Standard analysis requires that chromosomes are counted in twenty cells. Twenty additional cells were examined with no further evidence of this nonclonal aberration. Nonclonal findings likely result from echnical artifact, but may be due to a developing clonal abnormality or to low-level mosaicism.

Chromosome Analysis Report: 070104

Date Reported:	Wednesday, January 17,	Cell Line Gender:	Female
	2018		

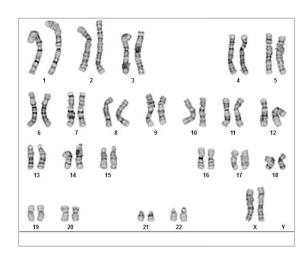

Cell Line: UCSD197i-30-2-WB54408 13237 Reason for Testing: lot release testing

Passage#: 29

Date of Sample: 1/11/2018 Investigator: , WiCell CDM Specimen: Human IPSC

Results: 46,XX

Nonclonal findings: 47,XX,+12

Cell: 20 Slide: G01

Slide Type: Karyotype

Total Counted: 40
Total Analyzed: 8
Total Karyogrammed: 4

Band Resolution: 450 - 525

Interpretation:

This is a normal karyotype. No clonal abnormalities were detected at the stated band level of resolution.

There is one nonclonal finding, listed above. Standard analysis requires that chromosomes are counted in twenty cells. Twenty additional cells were examined with no further evidence of this nonclonal aberration. Nonclonal findings likely result from technical artifact, but may be due to a developing clonal abnormality or to low-level mosaicism.

Limitations: This assay allows for microscopic visualization of numerical and structural chromosome abnormalities. The size of structural abnormality that can be detected is >3-10Mb, dependent upon the G-band resolution obtained from this specimen. For the purposes of this report, band level is defined as the number of G-bands per haploid genome. It is documented here as "band level", i.e., the range of bands determined from the four karyograms in this assay. Detection of heterogeneity of clonal cell populations in this specimen (i.e.,mosaicism) is limited by the number of metaphase cells examined, documented here as "# of cells counted".

This assay was conducted solely for listed investigator/institution. The results may not be relied upon by any other party without the prior written consent of the Director of the WiCell Cytogenetics Laboratory. The results of this assay are for research use only. If the results of this assay are to be used for any other purpose, contact the Director of the WiCell Cytogenetics Laboratory.

<u>Results:</u> Based on the 13237-STR cells submitted by WiCell QA dated and received on 01/22/18, this sample (Label on Tube: 13237-STR) defines the STR profile of the human stem cell line UCSD197i-30-2 comprising 28 allelic polymorphisms across the 15 STR loci analyzed.

<u>Interpretation:</u> No STR polymorphisms other than those corresponding to the human UCSD197i-30-2 stem cell line were detected and the concentration of DNA required to achieve an acceptable STR genotype (signal/noise) was equivalent to that required for the standard procedure (~1 ng/amplification reaction) from human genomic DNA. This result suggests that the 13237-STR sample submitted corresponds to the UCSD197i-30-2 stem cell line and was not contaminated with any other human stem cells or a significant amount of mouse feeder layer cells.

<u>Sensitivity:</u> Sensitivity limits for detection of STR polymorphisms unique to either this or other human stem cell lines is ~2-5%.
