

Thaw and Culture Details

Cell Line Name	UCSD196i-30-1
WiCell Lot Number	WB57099
Provider	University of California, San Diego – Dr. Kelly Frazer
Banked By	WiCell
Thaw and Culture Recommendations	WiCell recommends thawing 1 vial into 4 wells of a 6 well plate.
Culture Platform	Feeder Independent
	Medium: mTeSR™1
	Matrix: Matrigel®
Protocol	WiCell Feeder Independent mTeSR™1 Protocol
Passage Number	p27 These cells were cultured for 26 passages prior to freeze and post reprogramming. WiCell adds +1 to the passage number to best represent the overall passage number of the cells at thaw.
Date Vialied	12-January-2017
Vial Label	UCSD196i-30-1 p27 WB57099
Biosafety and Use Information	Appropriate biosafety precautions should be followed when working with these cells. The end user is responsible for ensuring that the cells are handled and stored in an appropriate manner. WiCell is not responsible for damages or injuries that may result from the use of these cells. Cells distributed by WiCell are intended for research purposes only and are not intended for use in humans.

Testing Performed by WiCell

Test Description	Test Provider	Test Method	Test Specification	Result
Karyotype by G-banding	WiCell	SOP-CH-003	Expected karyotype	See Report
	<p>Results: 46,XX,t(9;13)(p10;p10)[20] Interpretation: This is an abnormal karyotype. An apparently balanced whole arm translocation between chromosomes 9 and 13 is present in twenty of twenty cells examined. No other clonal abnormalities were detected at the stated band level of resolution. Comparison of this karyotype with the karyotype of the source (parental) specimen may be informative regarding the significance and origin of the apparently balanced translocation.</p>

Date Reported: Tuesday, July 17, 2018
Cell Line: UCSD196i-30-1-WB57099 13831
Passage#: 27
Date of Sample: 7/9/2018
Specimen: Human IPS
Results: 46,XX,t(9;13)(p10;p10)[20]

Cell Line Sex: Female
Reason for Testing: lot release testing
Investigator: [REDACTED], WiCell

Cell: 24
Slide: G01
Slide Type: Karyotype

Total Counted: 20
Total Analyzed: 8
Total Karyogrammed: 4
Band Resolution: 400 - 550

Interpretation:

This is an abnormal karyotype. An apparently balanced whole arm translocation between chromosomes 9 and 13 is present in twenty of twenty cells examined. No other clonal abnormalities were detected at the stated band level of resolution.

Comparison of this karyotype with the karyotype of the source (parental) specimen may be informative regarding the significance and origin of the apparently balanced translocation.

Limitations: This assay allows for microscopic visualization of numerical and structural chromosome abnormalities. The size of structural abnormality that can be detected is >3-10Mb, dependent upon the G-band resolution obtained from this specimen. For the purposes of this report, band level is defined as the number of G-bands per haploid genome. It is documented here as "band level", i.e., the range of bands determined from the four karyograms in this assay. Detection of heterogeneity of clonal cell populations in this specimen (i.e., mosaicism) is limited by the number of metaphase cells examined, documented here as "# of cells counted".

This assay was conducted solely for listed investigator/institution. The results of this assay are for research use only. Unless otherwise mutually agreed in writing, the services provided to you hereunder by WiCell Research Institute, Inc. Results: Based on the 13831-STR cells submitted by WiCell QA dated and received on 07/16/18, this sample (Label on Tube: 13831-STR) defines the STR profile of the human stem cell line UCSD196i-30-1 comprising 28 allelic polymorphisms across the 15 STR loci analyzed.

Interpretation: No STR polymorphisms other than those corresponding to the human UCSD196i-30-1 stem cell line were detected and the concentration of DNA required to achieve an acceptable STR genotype (signal/noise) was equivalent to that required for the standard procedure (~1 ng/amplification reaction) from human genomic DNA. This result suggests that the 13831-STR sample submitted corresponds to the UCSD196i-30-1 stem cell line and was not contaminated with any other human stem cells or a significant amount of mouse feeder layer cells.

Sensitivity: Sensitivity limits for detection of STR polymorphisms unique to either this or other human stem cell lines is ~2-5%.
