### Chromosome Analysis Report: 068010

Date Reported: Saturday, September 30,

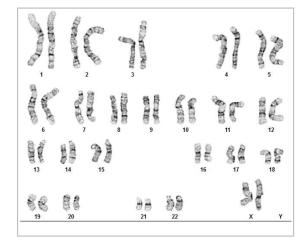

2017

Cell Line: UCSD132i-78-1-WB61728 12866

Passage#: 18

Date of Sample: 9/18/2017 Specimen: Human IPSC

Results: 46,XX

Cell Line Gender: Female

Reason for Testing: lot release testing

Investigator:

Cell: 20 Slide: G01

Slide Type: Karyotype

Total Counted: 20
Total Analyzed: 8

Total Karyogrammed: 4
Band Resolution: 450 - 525

QC Review By: \_\_\_\_

#### Interpretation:

Date:

This is a normal karyotype. No clonal abnormalities were detected at the stated band level of resolution.

Completed by:
Reviewed and Interpreted by:

A signed copy of this report is available upon request.

Limitations: This assay allows for microscopic visualization of numerical and structural chromosome abnormalities. The size of structural abnormality that can be detected is >3-10Mb, dependent upon the G-band resolution obtained from this specimen. For the purposes of this report, band level is defined as the number of G-bands per

haploid genome. It is documented here as "band level", i.e., the range of bands determined from the four karyograms in this assay. Detection of heterogeneity of clonal cell populations in this specimen (i.e., mosaicism) is limited by the number of metaphase cells examined, documented here as "# of cells counted".

<u>Results:</u> Based on the 12866-STR cells submitted by WiCell QA dated and received on 09/25/17, this sample (Label on Tube: 12866-STR) defines the STR profile of the human stem cell line UCSD132i-78-1 comprising 28 allelic polymorphisms across the 15 STR loci analyzed.

<u>Interpretation:</u> No STR polymorphisms other than those corresponding to the human UCSD132i-78-1 stem cell line were detected and the concentration of DNA required to achieve an acceptable STR genotype (signal/noise) was equivalent to that required for the standard procedure (~1 ng/amplification reaction) from human genomic DNA. This result suggests that the 12866-STR sample submitted corresponds to the UCSD132i-78-1 stem cell line and was not contaminated with any other human stem cells or a significant amount of mouse feeder layer cells.

<u>Sensitivity:</u> Sensitivity limits for detection of STR polymorphisms unique to either this or other human stem cell lines is ~2-5%.
