

# **Certificate of Analysis**

### **Thaw and Culture Details**

Cell Line Name	WA01		
WiCell Lot Number	WB67657		
Provider/Client	University of Wisconsin – Laboratory of	Dr. James Thomson	
Banked By	WiCell		
Thaw and Culture Recommendations	WiCell recommends thawing 1 vial into 3 wells of a 6 well plate using mTeSR <sup>™</sup> Plus and Matrigel.		
Protocol	WiCell Feeder Independent Pluripotent	Stem Cell Protocol	
Culture Platform Prior to Freeze	Medium: mTeSR <sup>™</sup> Plus	Matrix: Matrigel <sup>®</sup>	
Passage Number	p22 Cells were cultured for 21 passages prior to freeze. Plated cells at thaw should be labeled passage 22.		
Date Vialed	24-May-2021		
Vial Label	WA01 p22 WB67657		
Biosafety and Use Information	Appropriate biosafety precautions should be followed when working with these cells. The end user is responsible for ensuring that the cells are handled and stored in an appropriate manner. WiCell is not responsible for damages or injuries that may result from the use of these cells. Cells distributed by WiCell are intended for research purposes only and are not intended for use in humans.		

The material provided under this certificate has been subjected to the tests specified and the results and data described herein are accurate based on WiCell's reasonable knowledge and belief. Appropriate Biosafety Level practices and universal precautions should always be used with this material. For clarity, the foregoing is governed solely by WiCell's Terms and Conditions of Service, which can be found at http://www.wicell.org/privacyandterms.

Chromosome Analysis Report: 086550

Date Reported: Friday, June 18, 2021 Cell Line: WA01-WB67657 Submitted Passage #: 22 Date of Sample: 6/7/2021 Specimen: Human ESC Results: 46,XY Cell Line Sex: Male Reason for Testing: LOT\_RELEASE

Investigator: WiCell Stem Cell Bank, WiCell

Cell: 26 Slide: G02 Slide Type: Karyotype Total Counted: 20 Total Analyzed: 8 Total Karyogrammed: 4 Band Resolution: 425 - 475

#### Interpretation:

This is a normal karyotype; no clonal abnormalities were detected at the stated band level of resolution.

Completed by: Reviewed and Interpreted by: Leah George, CG(ASCP) Vanessa Horner, PhD, FACMG

Limitations: This assay allows for microscopic visualization of numerical and structural chromosome abnormalities. The size of structural abnormality that can be detected is >3-10Mb, dependent upon the G-band resolution obtained from this specimen. For the purposes of this report, band level is defined as the number of G-bands per haploid genome. It is documented here as "band level", i.e., the range of bands determined from the four karyograms in this assay. Detection of heterogeneity of clonal cell populations in this specimen (i.e.,mosaicism) is limited by the number of metaphase cells examined, documented here as "# of cells counted".

This assay was conducted solely for listed investigator/institution. The results of this assay are for research use only. Short Tandem Repeat

Requestor: WiCell Stem Cell Bank, WiCell Samples Received: 07Jun21, 08Jun21, 11Jun21 STR Amplification Date: 17Jun21 Form SOP-89.01 Version 5.0

<u>Assay Description</u>: STR analysis is performed using the PowerPlex 16 HS System by Promega<sup>™</sup>. Results are reported as 13 CODIS STR markers, Amelogenin for gender determination and two low-stutter, highly discriminating pentanucleotide STR markers.

**<u>Results</u>**: The genotypic profiles comprise a range of 25-28 allelic polymorphisms across the 15 STR loci analyzed.

<u>Interpretation</u>: The concentration of DNA required to achieve an acceptable STR genotype (signal/ noise) was equivalent to that required for the standard procedure (~1 ng/amplification reaction) from human genomic DNA. These results suggests that the cells submitted correspond to the cell lines as named and were not contaminated with any other human cells or a significant amount of mouse feeder layer cells.

**Sensitivity:** Sensitivity limits for detection of STR polymorphisms unique to either this or other human cell lines is ~2-5%.
